

How Do Gender Roles Shape Employment Patterns Across Pacific Island Nations?

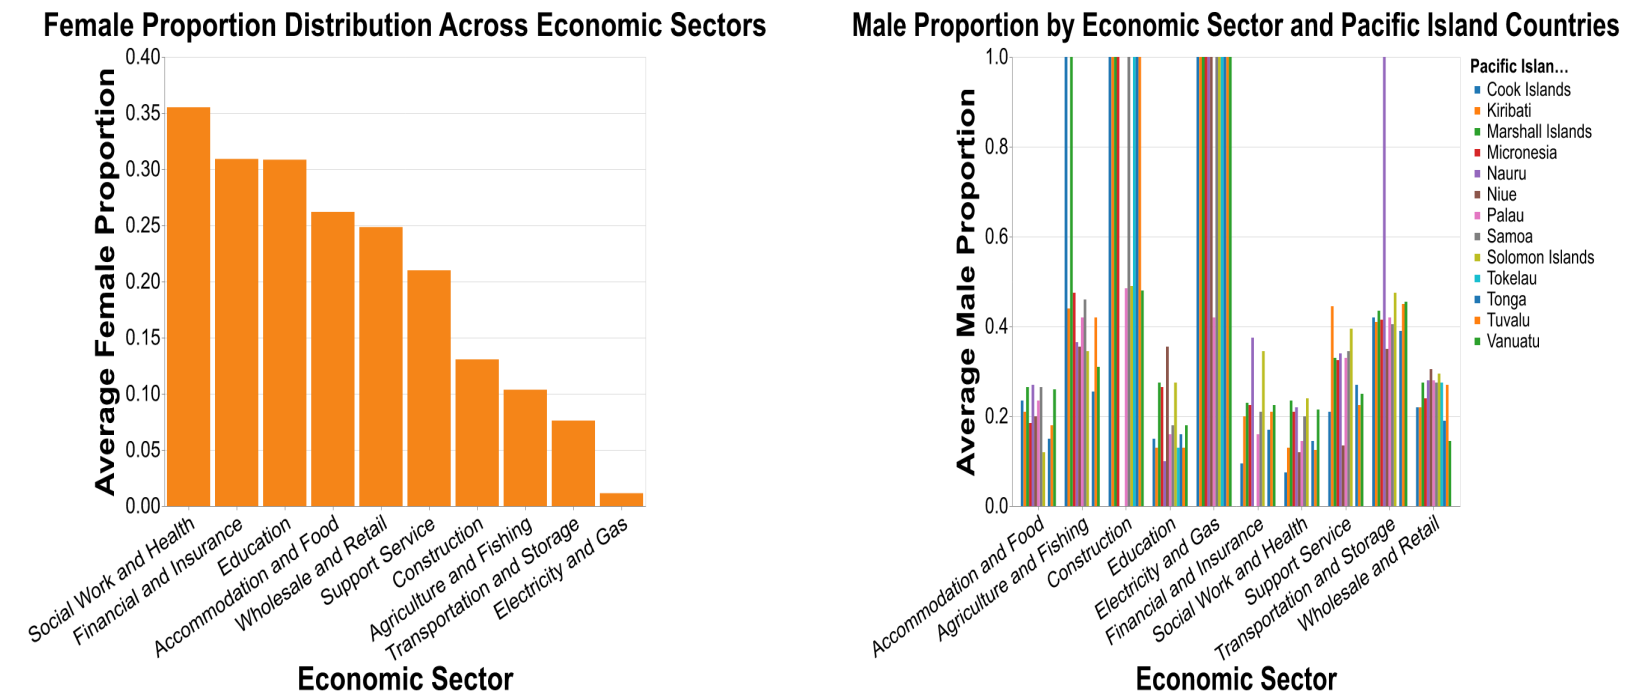

INTRODUCTION

This poster explores gender distribution and employment patterns across Pacific Island countries. It highlights disparities in male and female participation within various economic sectors. The analysis compares female engagement in specific sectors between selected island nations. The findings aim to inform policies promoting gender equality in regional employment.

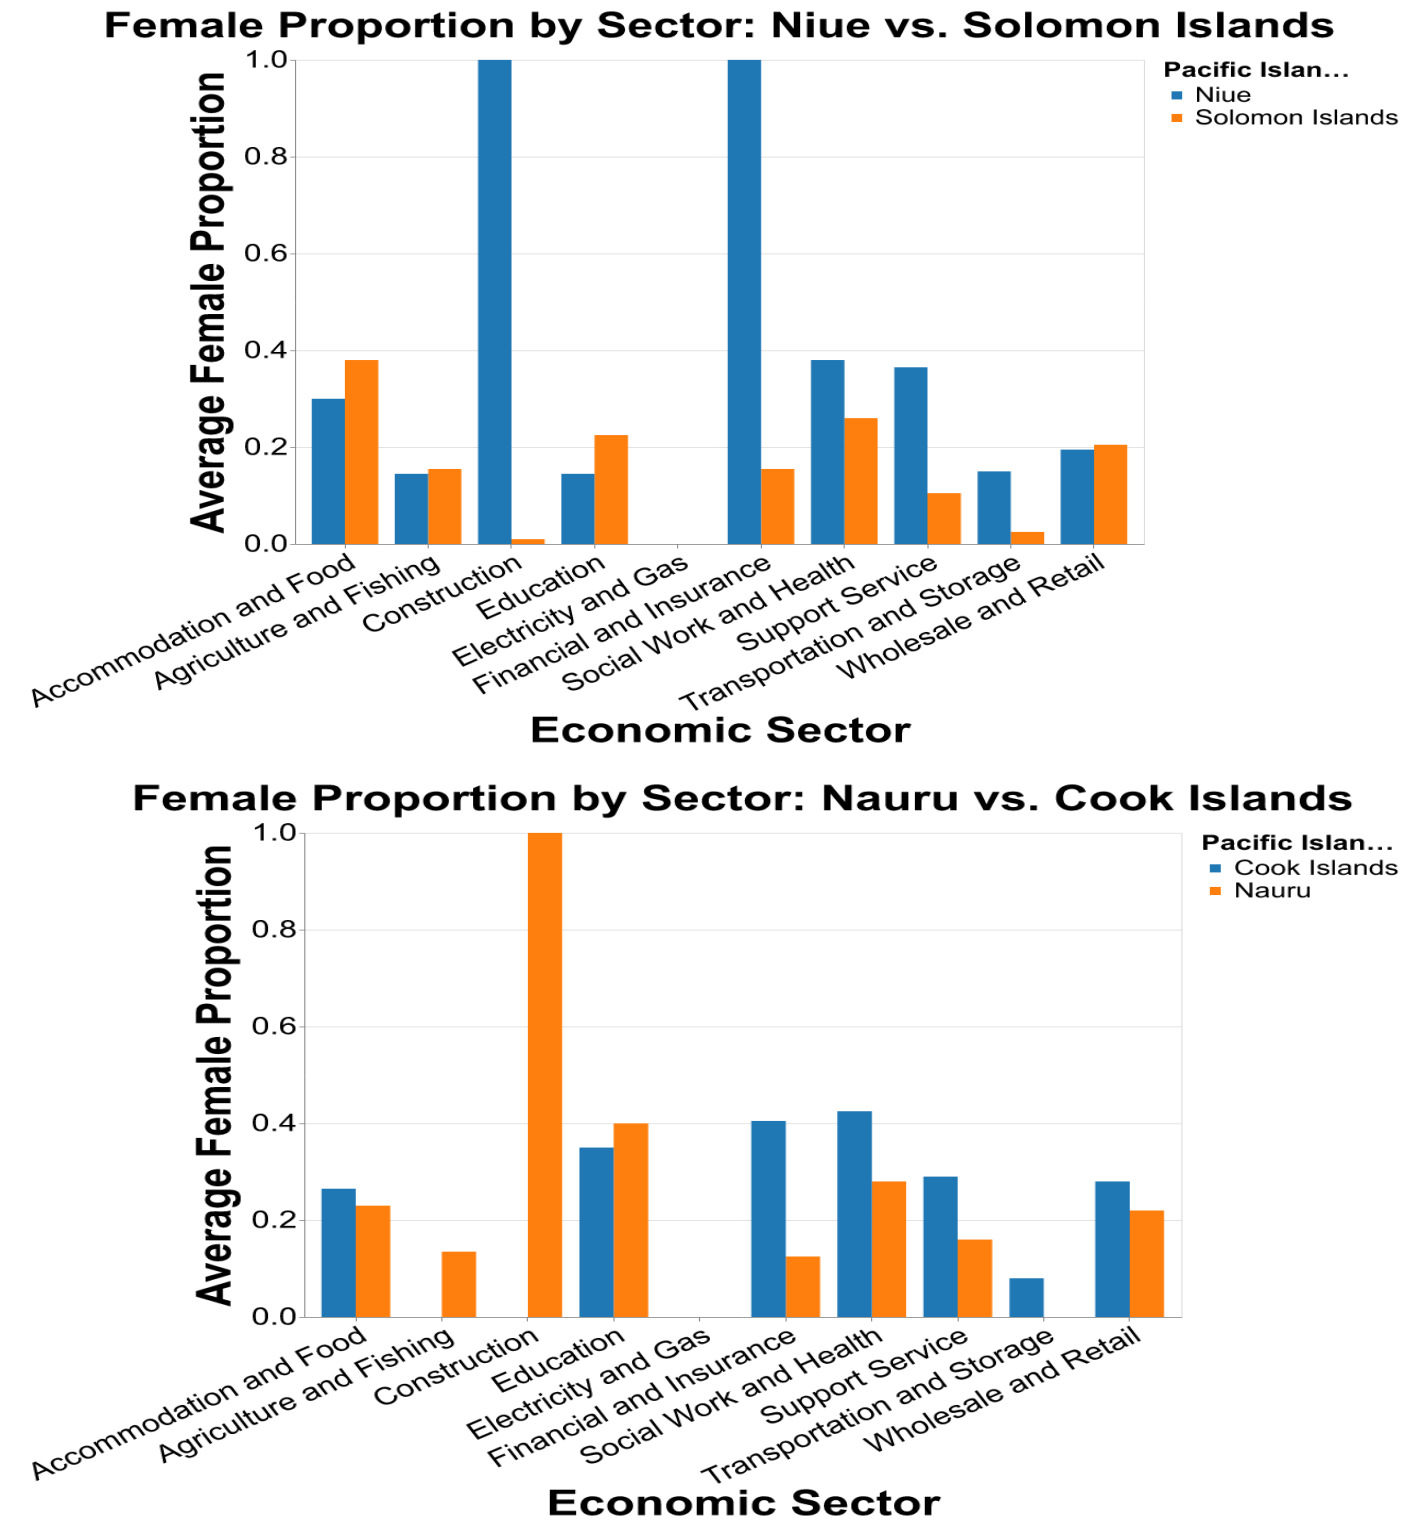

01 Explore male population proportions and total employment figures, broken down by sex and country.

02 Analyze male and female representation across various economic sectors within Pacific Island nations.

03 Compare female workforce distribution across sectors in specific Pacific Island countries.

CONCLUSION

Employment in Pacific Island countries is heavily concentrated in agriculture and fishing, with marked gender disparities reflecting traditional roles—men dominate physically demanding sectors like construction and electricity, while women prevail in social work and health. Niue and Solomon Islands exemplify these patterns, showing stark contrasts in sectoral female participation. Meanwhile, Nauru and Cook Islands reveal persistent male dominance in primary industries. Addressing these entrenched divides is crucial for fostering inclusive economic growth and gender equity across the region's diverse labor markets.
