

How do gender and economic sectors divide labor in Pacific Island employment?

INTRODUCTION

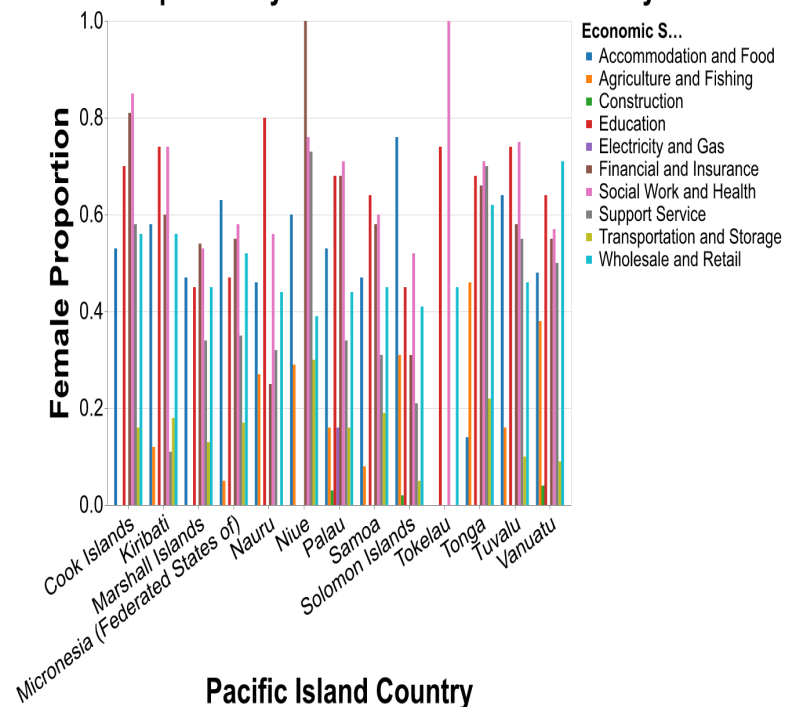

This poster explores employment trends across Pacific Island countries. We analyze overall employment and female labor force participation. Data highlights gender distribution within various economic sectors. A detailed snapshot of Tokelau's gender employment is provided.

01 Total employment and sector distribution vary significantly across Pacific Island countries.

Number of Employed Persons by Pacific Island Country

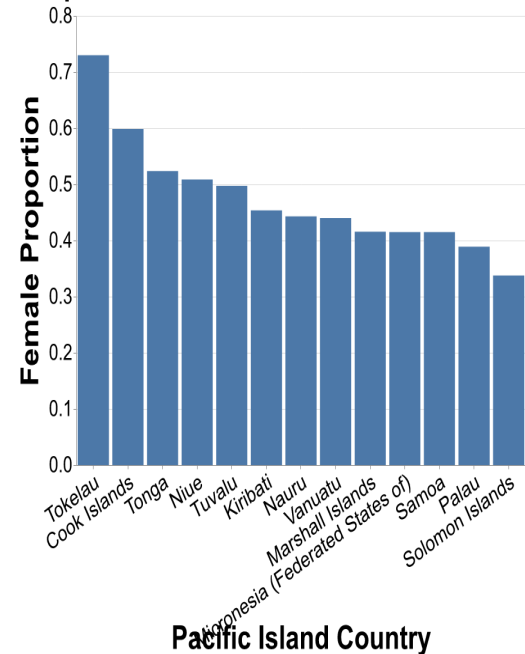

Female Proportion by Economic Sector and Country

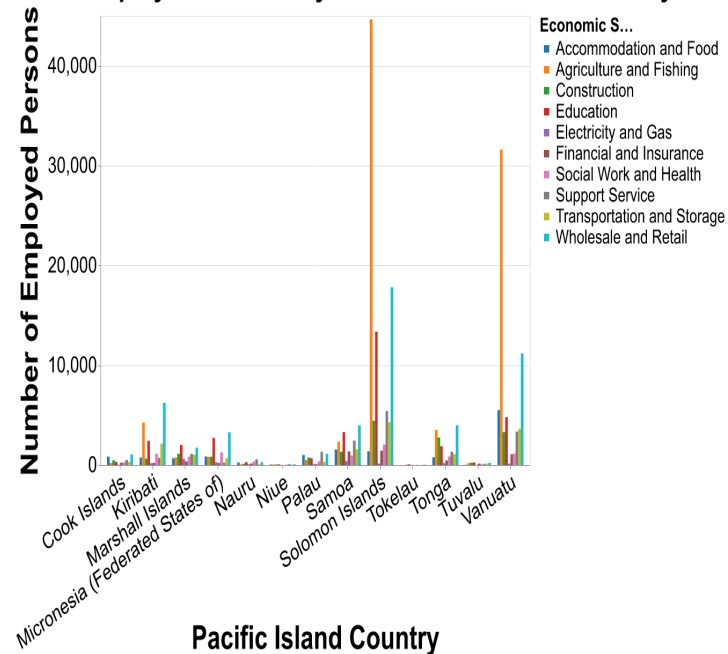

02 Female employment proportions differ by sector and country, showing diverse participation patterns.

Female Proportion Distribution Across Pacific Island Countries

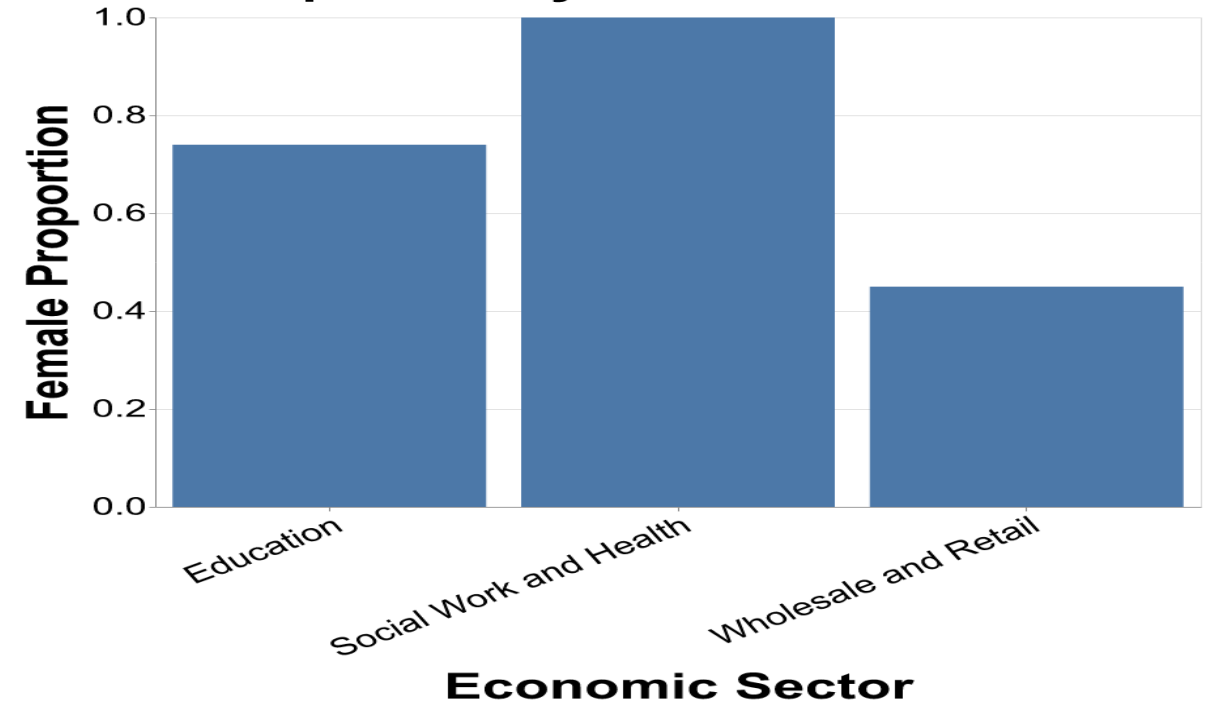

Number of Employed Persons by Economic Sector and Country

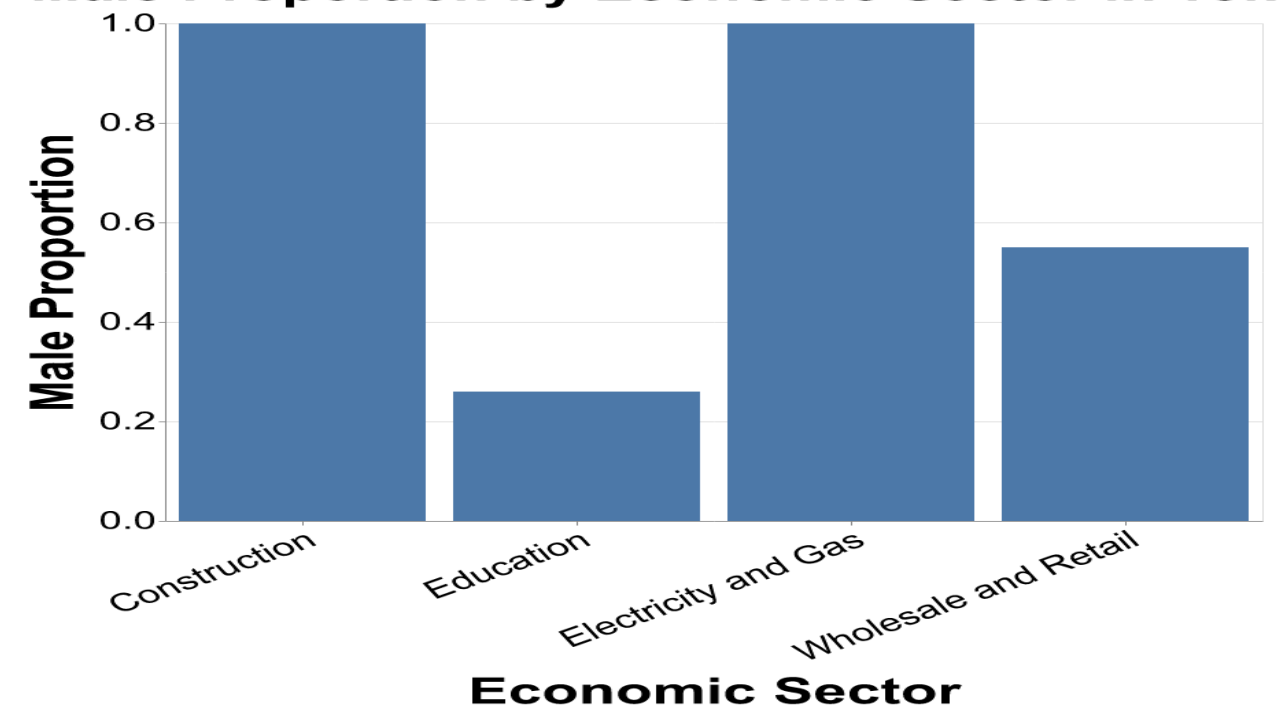

03 Tokelau's employment shows distinct male and female proportions across economic sectors.

Female Proportion by Economic Sector in Tokelau

Male Proportion by Economic Sector in Tokelau

CONCLUSION

Employment levels vary significantly across Pacific Island nations. Solomon Islands records the highest total employed population. Female employment rates show notable disparities by sector. Tokelau exhibits the highest average female proportion. Agriculture and Fishing emerges as the dominant employment sector. Interestingly, some sectors report zero male participation. Conversely, construction and electricity are exclusively male-dominated. These trends reflect diverse economic landscapes. They also highlight distinct gender-based labor divisions. Such insights can guide future policy development.
