

What gender disparities exist in Pacific Island employment, and why is Construction so male-dominated?

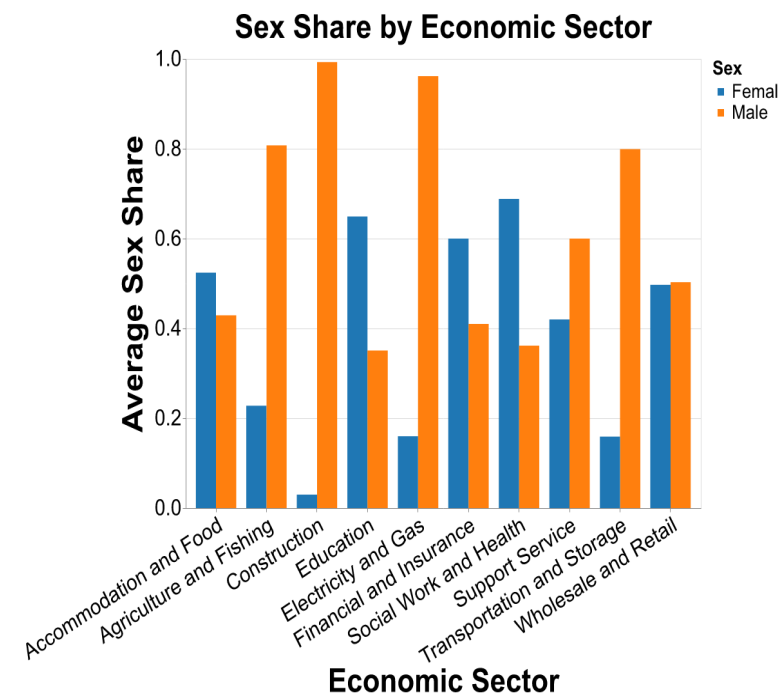

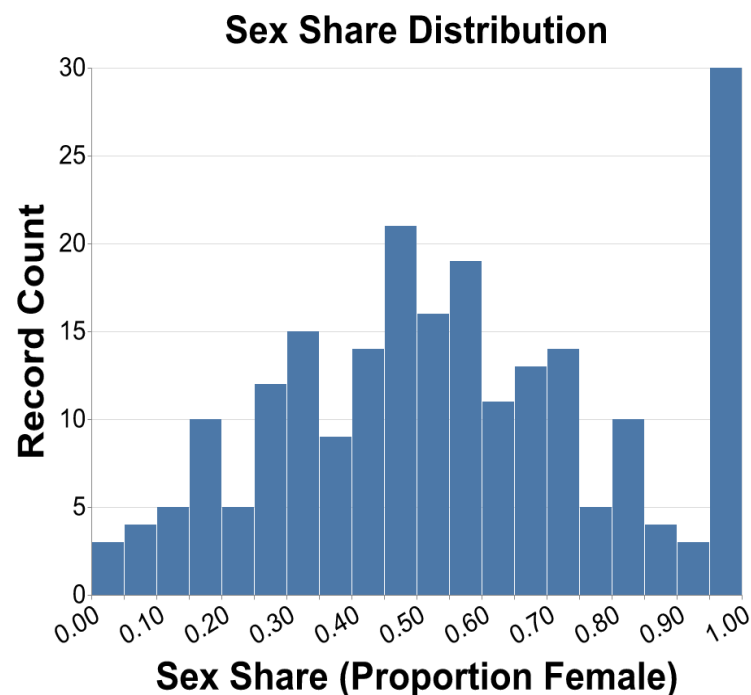

INTRODUCTION

This poster explores employment and gender distribution in Pacific Island countries. We compare total employment and gender shares across various nations. General gender distribution patterns within economic sectors are then examined. Finally, country-specific employment details and gender disparities are highlighted.

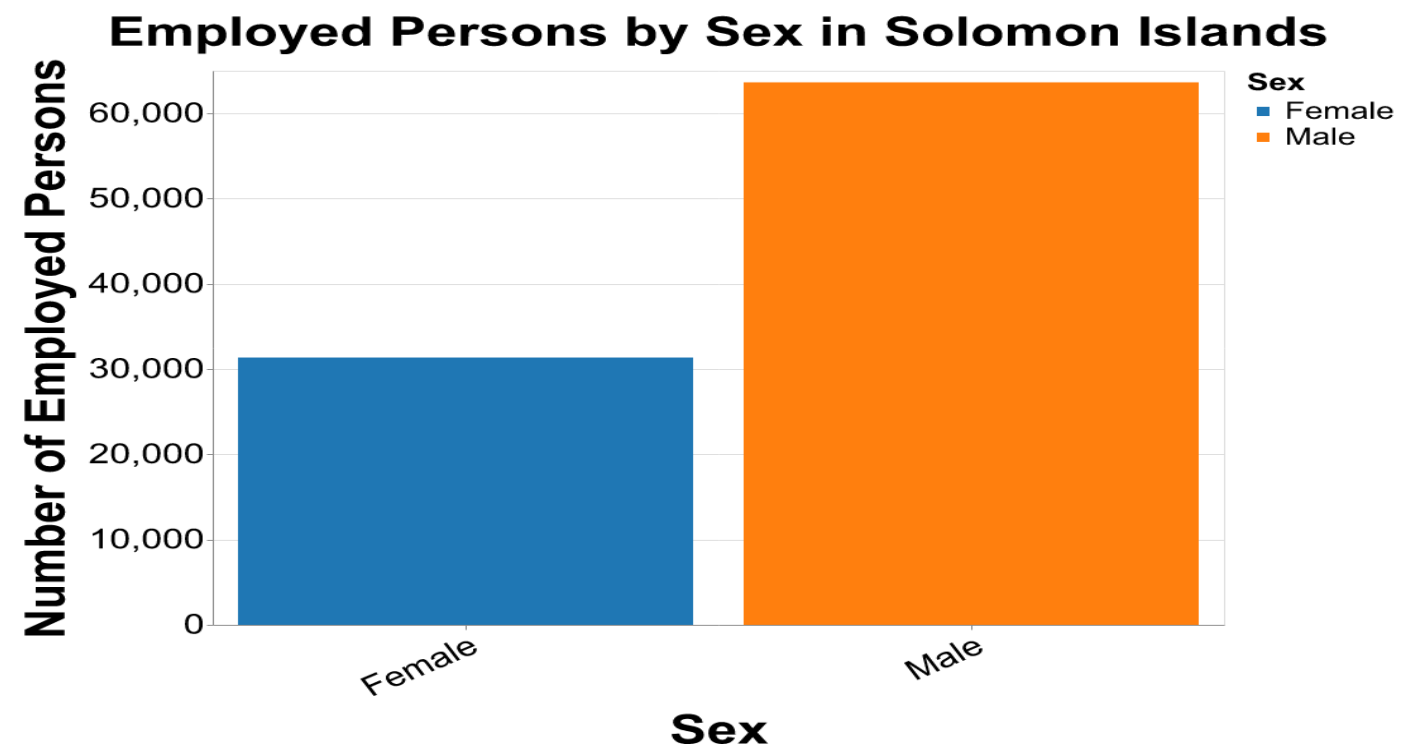

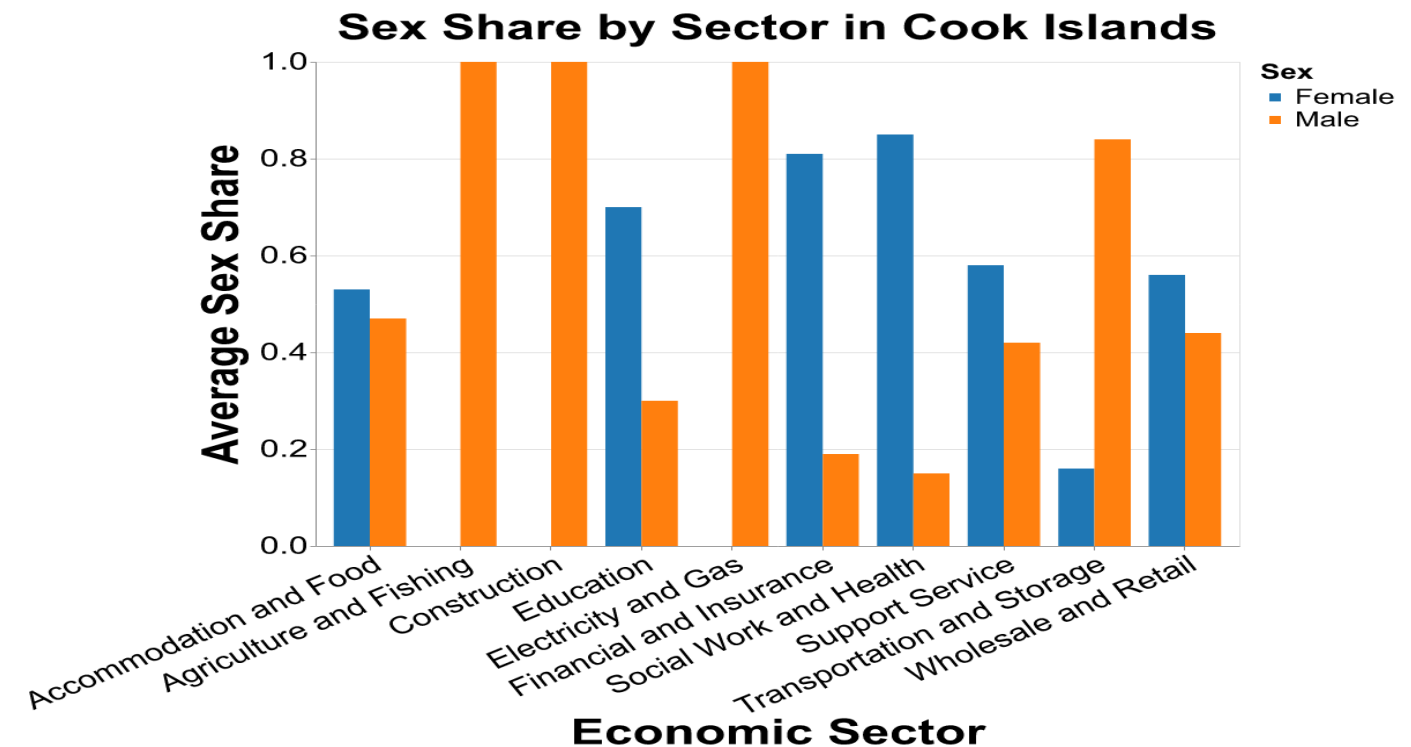

01 These charts offer a comparative view of total employment and gender distribution across sectors by country.

02 These charts illustrate the general patterns of gender distribution across various economic sectors.

03 These charts provide detailed, country-specific breakdowns of employment by sex and sector for selected nations.

CONCLUSION

Solomon Islands leads Pacific Island Countries in employment; Niue records the lowest. Tokelau exhibits the highest Total Sex Share among Pacific Island Countries. Agriculture and Fishing is the largest Economic sector for employment. Financial and Insurance Economic sector, conversely, has the lowest employed persons. The Economic sector of Construction shows the most significant gender disparity. Extreme gender concentration marks Agriculture, Construction, and Electricity and Gas sectors. Specifically, the Male Employment Rate is exceptionally high within the Construction sector.
