

# How Do Victim Age and Race Patterns Differ Across Cities and Crime Types?

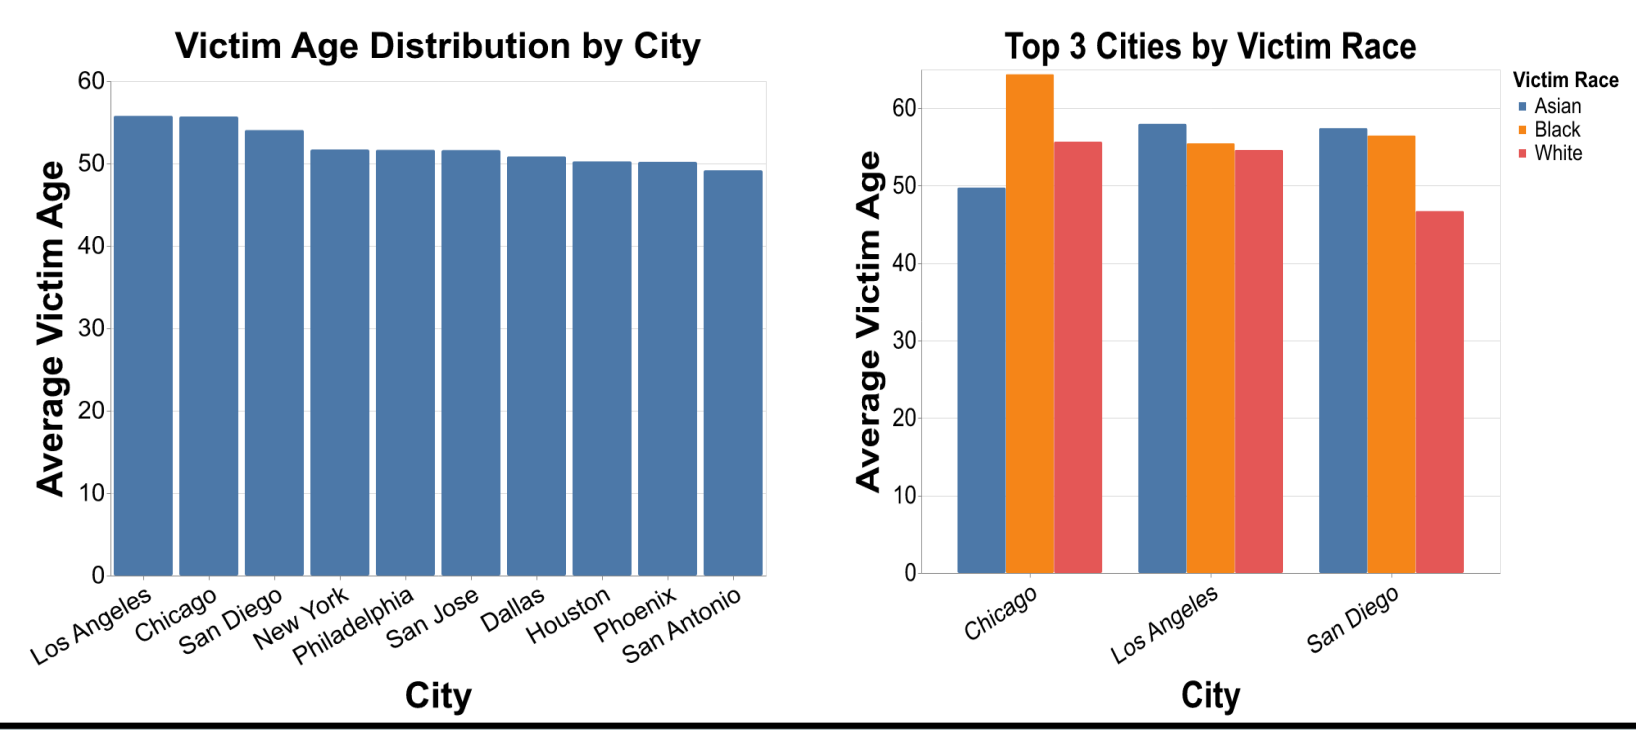

## INTRODUCTION

Victim age varies significantly by crime type, city, and race across the dataset. This poster analyzes average victim ages for different crimes in ten major U.S. cities. The data highlights key differences in victim demographics by crime and location.

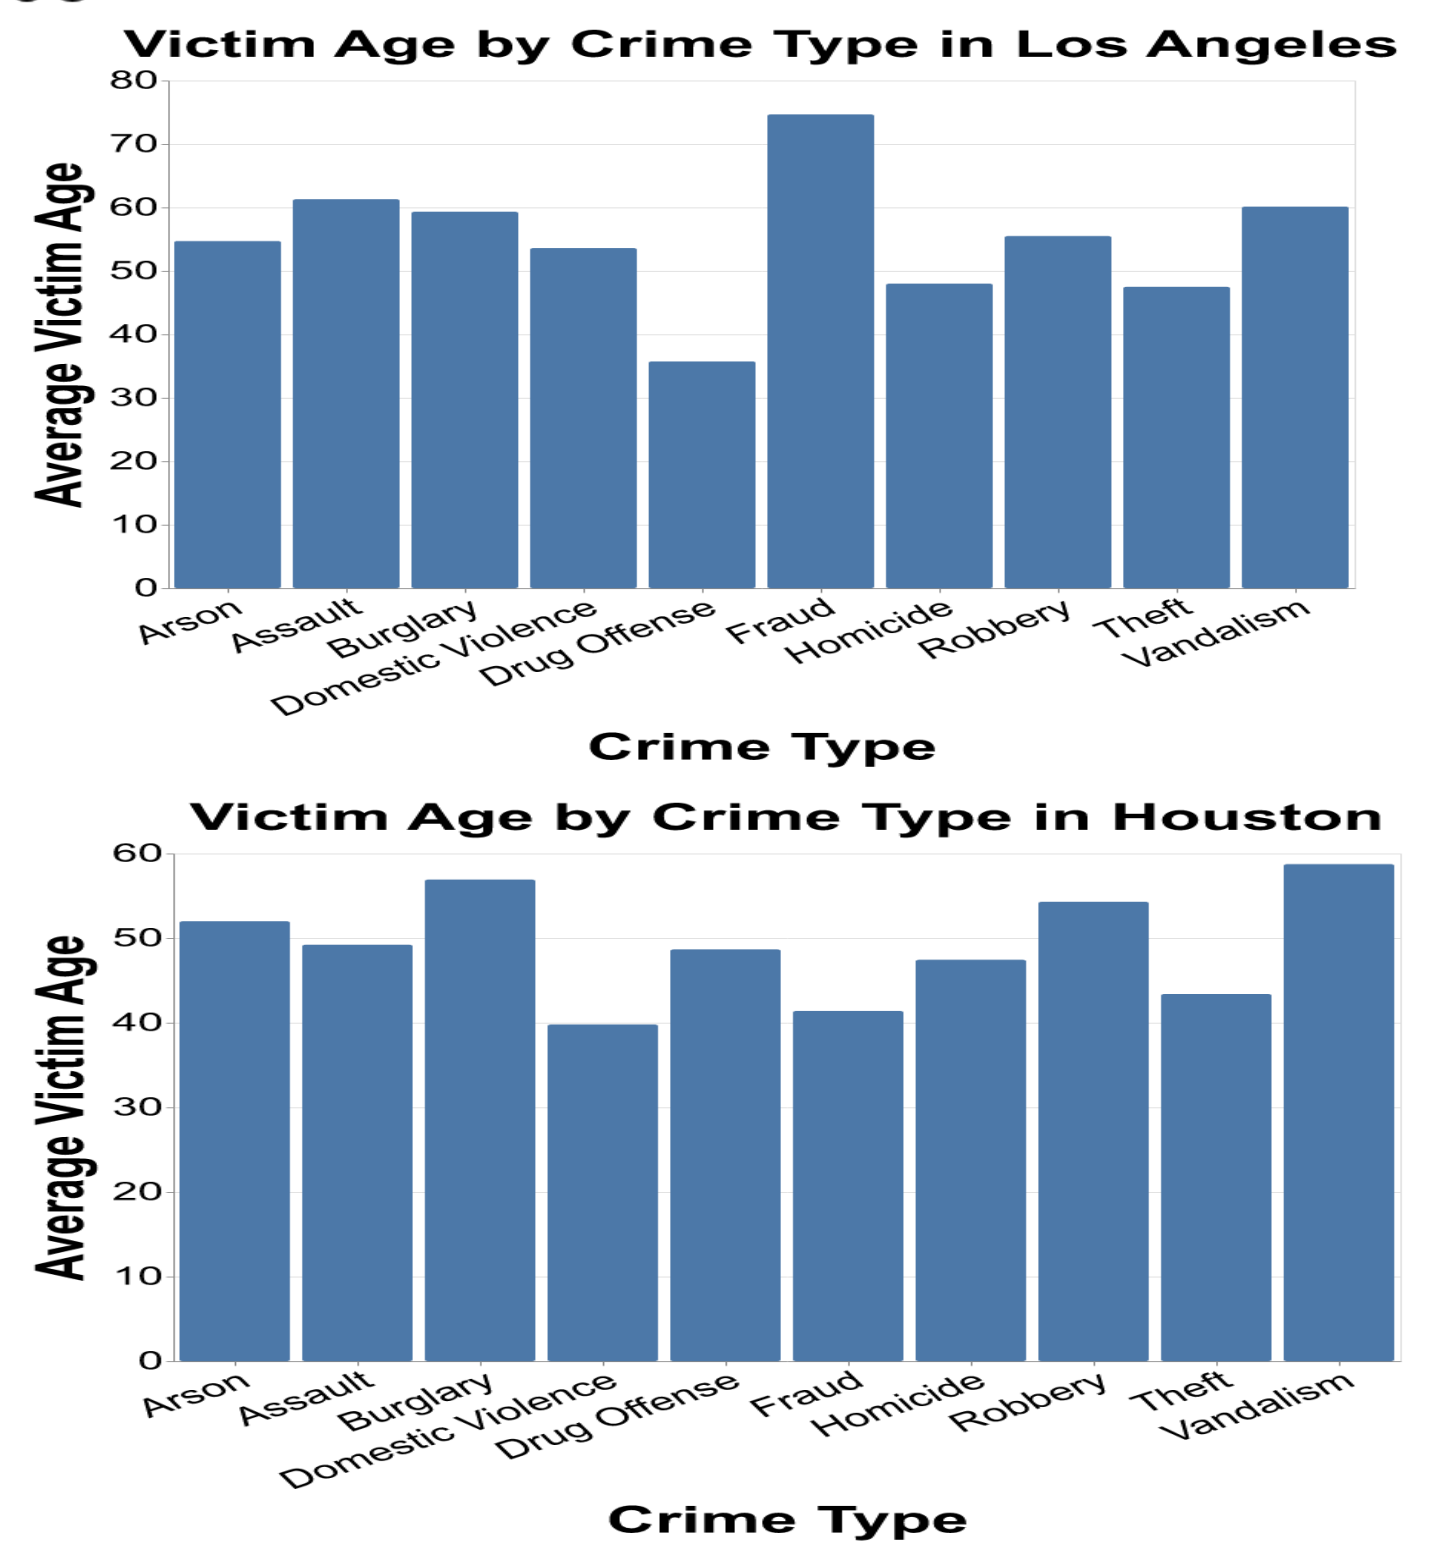

01 Victim age varies by crime type and differs across cities.

02 Victim race distribution highlights key cities with highest representation.

03 Victim age patterns by crime type differ between Los Angeles and Houston.

## CONCLUSION

Victim age varies notably by crime type and city. Race distribution shows key cities with high victim representation. Age patterns differ between Los Angeles and Houston for various crimes. These differences highlight the need for targeted crime prevention strategies.
