

How Do Region, Industry, and Gender Shape Global Billionaire Wealth Distribution?

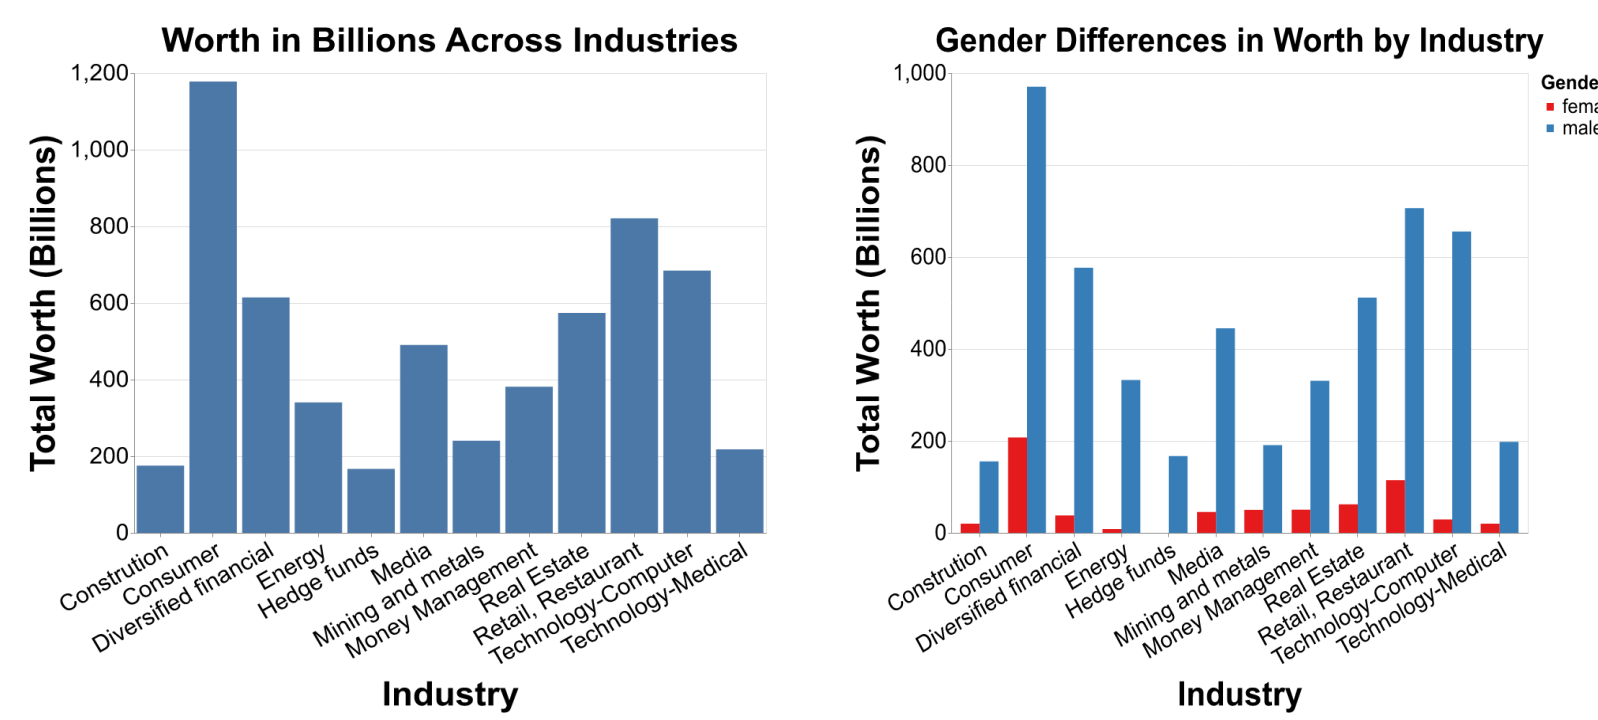

INTRODUCTION

This poster analyzes billionaire wealth distribution by region, industry, and gender. It highlights regional differences in total wealth and industry dominance. Gender disparities in wealth are examined across various industries globally and regionally. The findings reveal patterns of concentration and inequality in billionaire wealth worldwide.

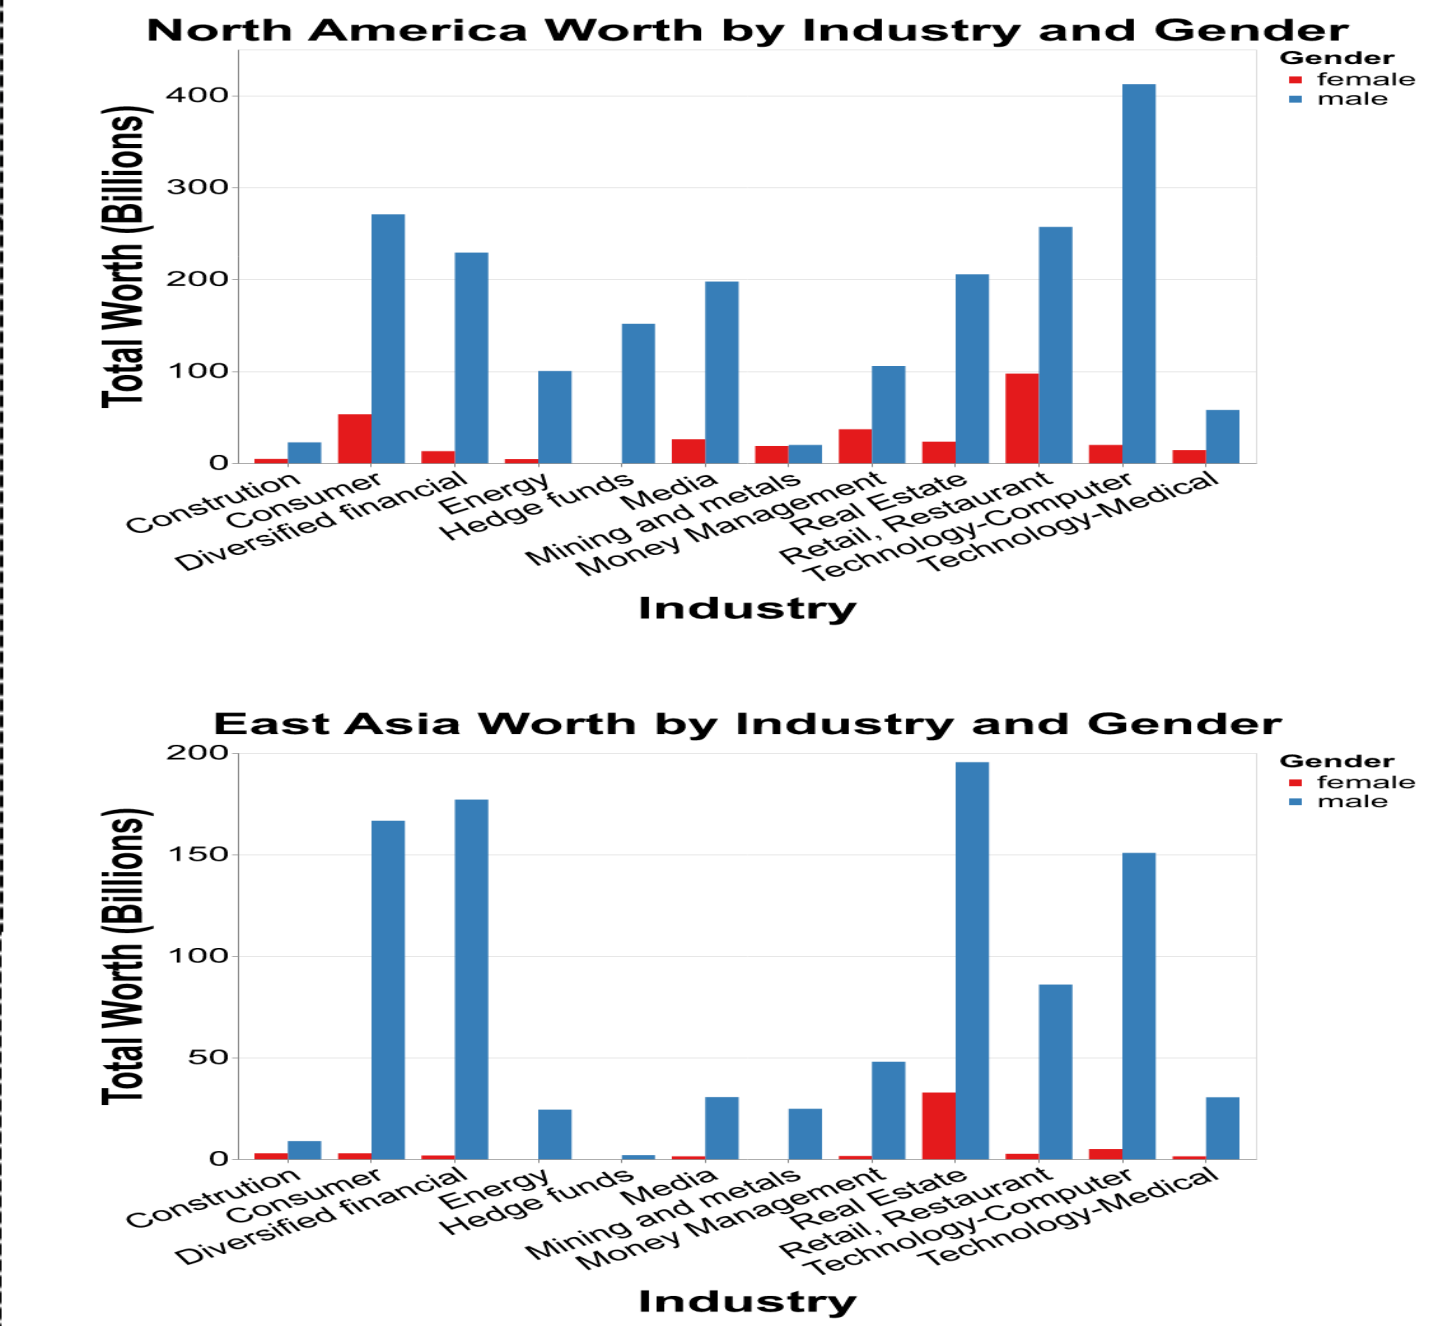

01 North America leads in billionaire worth globally, while Sub-Saharan Africa shows significant gender shares in select industries.

02 Consumer and financial industries dominate billionaire wealth, with females showing higher ratios in select high-worth sectors.

03 Technology and finance dominate in North America and East Asia, with males holding substantially larger wealth shares.

CONCLUSION

North America leads billionaire wealth with 2342.9 billion, far surpassing other regions. Sub-Saharan Africa shows notable gender gaps, with males dominating high-value industries like construction. This uneven global distribution highlights economic disparities and potential for targeted regional development. Consumer and technology sectors hold the largest billionaire worth, exceeding 1,100 billion in Consumer. Males consistently dominate wealth across industries, with stark gender gaps especially in Consumer and Energy. These patterns suggest systemic barriers limiting female wealth accumulation in key industries. In North America, Technology-Computer and Energy dominate wealth, with males holding nearly 80% of total worth. East Asia's billionaire wealth centers on Consumer and Diversified Financial sectors, with males overwhelmingly leading. These regional patterns reveal persistent gender disparities and concentrated industry dominance.
