### 02 Female participation in education correlates with employment scale across sectors in Palau, indicating workforce gender dynamics.

Female Proportion in Education by Country

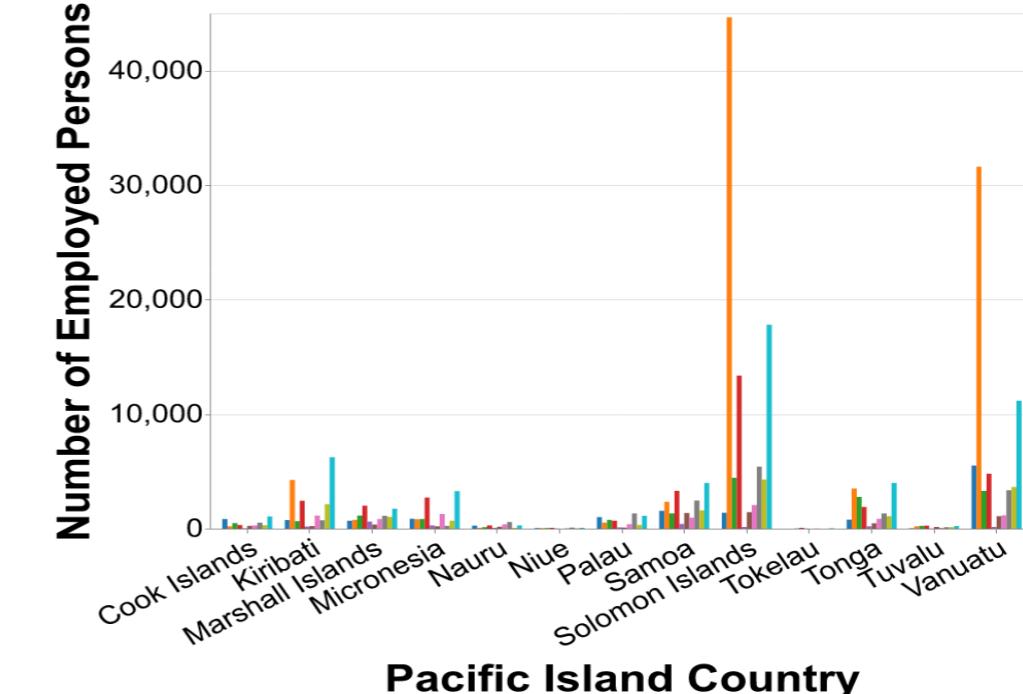

Employment Numbers by Sector in Palau

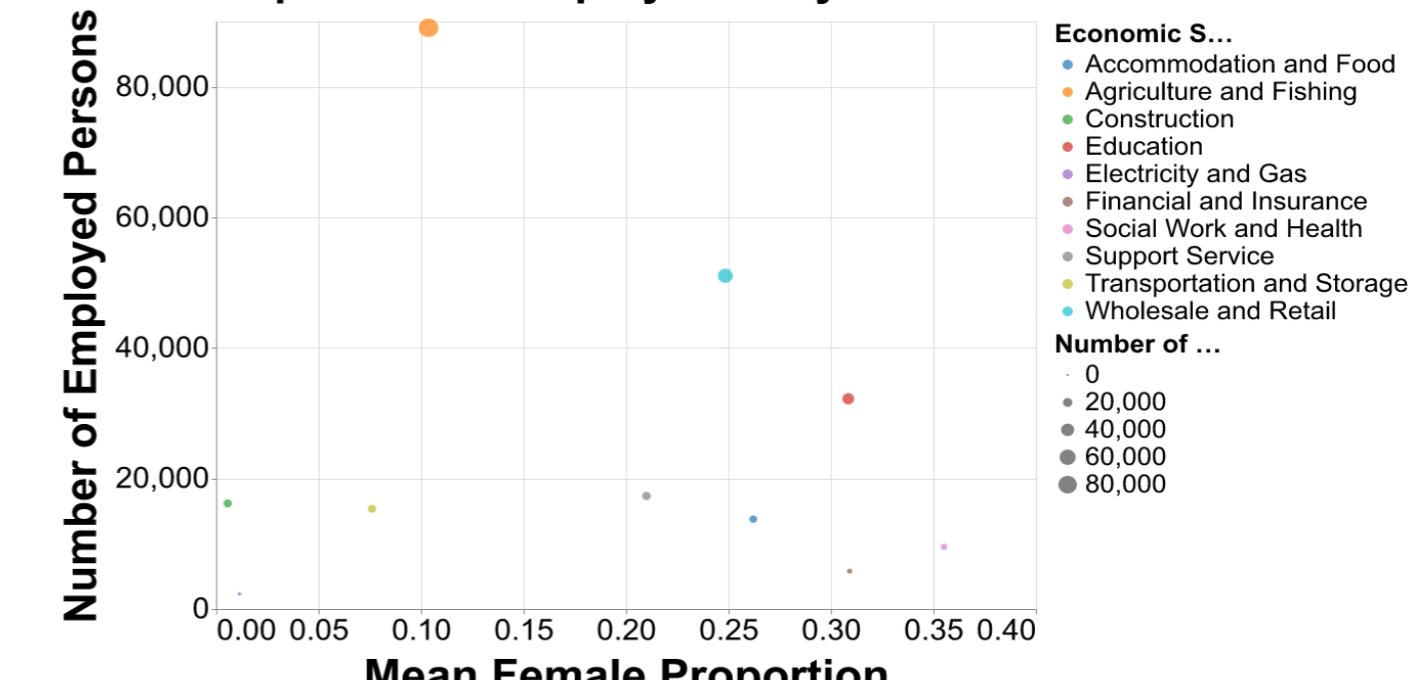

Comparing employment sectors and female workforce proportions reveals gender-related economic patterns across Pacific Island countries.

## 03

### Employment by Sector Across Pacific Island Countries

### Female Proportion vs Employment by Economic Sector

## CONCLUSION

Across Pacific Island countries, female representation in economic sectors varies widely, with Tokelau and Nauru showing notably higher proportions, while Solomon Islands and Niue lag behind. Employment sectors in Palau reveal pronounced gender disparities, especially male dominance in Construction and Agriculture, contrasted by female concentration in Social Work and Health. These patterns suggest entrenched cultural roles and sector-specific barriers, underscoring the need for policies promoting gender equity and diversification to harness the full economic potential of the region's workforce.
